

Table 4. Multivariate Logistic Regression Model^a.

	Chi Square	p	AUC	Sensitivity	1-Specificity
Whole Model	16.00	<0.001	0.69	0.6	0.21
Prior HSI	9.33	0.002			
Between-limb imbalance (%)	4.71	0.030			

^aUsing prior HSIs and between-limb imbalance in eccentric knee flexor strength as input variables. AUC, area under the curve; HSI, hamstring strain injury
